Home Care Chartbook 2022

Prepared by KNG Health Consulting, LLC

Sponsored by

The **Research Institute for Home Care** is a non-profit, national consortium of home care providers and organizations. The Institute invests in research and education about home health care and its ability to deliver quality, cost-effective, patient-centered care across the care continuum. The Institute is committed to conducting and sponsoring research and initiatives that demonstrate and enhance the value proposition that home care has to offer patients and the entire U.S. health care system.

Previously the Alliance for Home Health Quality & Innovation, the Institute has been providing critical research and data on home care for over a decade.

The Home Care Chartbook, published annually by the Institute, provides a broad overview of home health patients, the home health workforce, organizational trends, and the economic contribution of home health agencies. The Chartbook also provides data on 30-day rehospitalization rates.

It summarizes and analyzes statistics on home health from a range of government sources, including the Medicare Current Beneficiary Survey, Bureau of Labor Statistics, Medicare Cost Reports, Home Health Compare, and Medicare fee-for-service claims.

Demographics of Home Health Users

Sponsored by

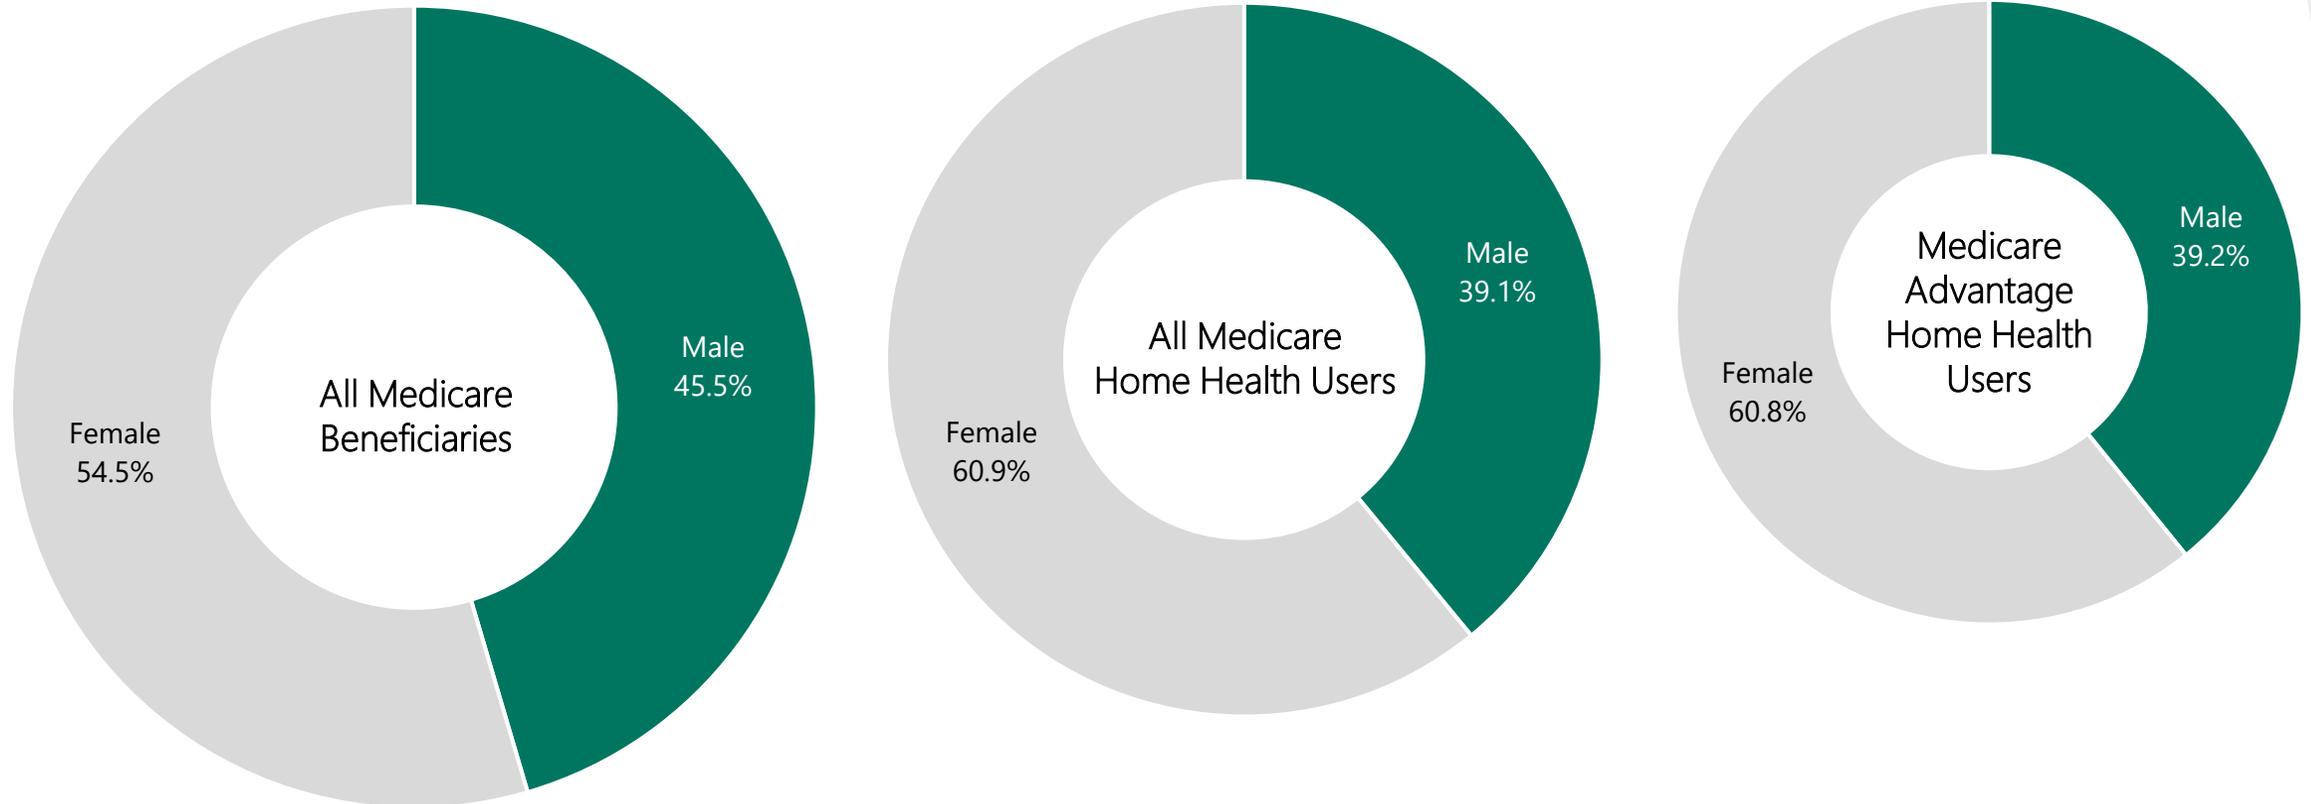

Chart 1.1: Age Distribution of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.
Totals may not sum to 100 percent due to rounding.
Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.2: Gender Distribution of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

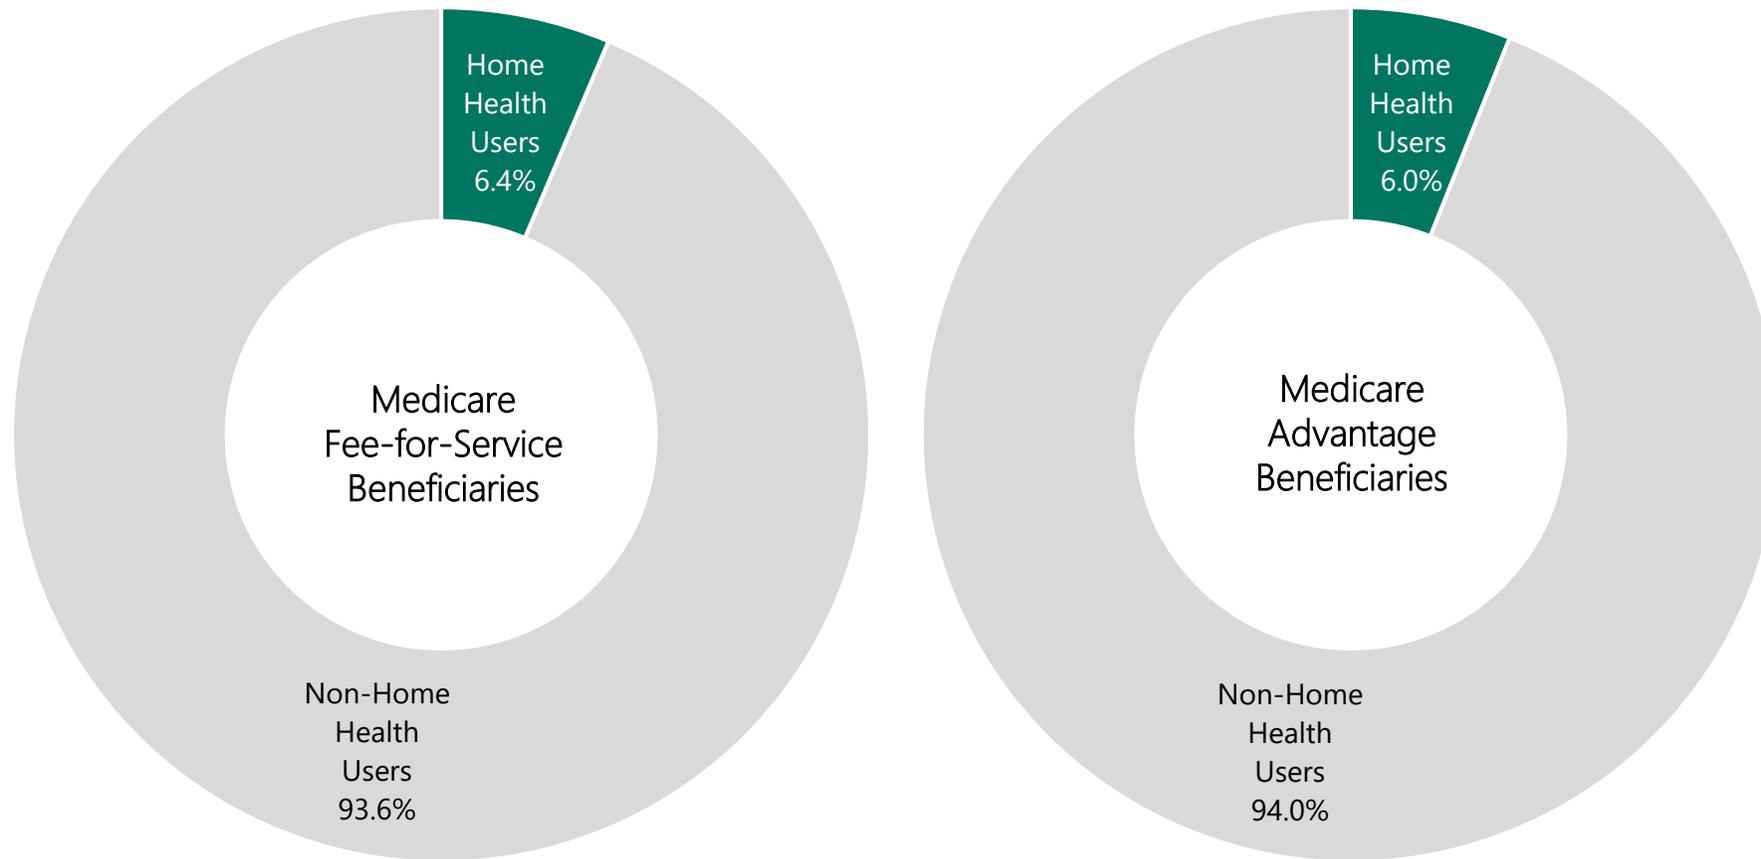

Demographics of Home Health Users

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.
Totals may not sum to 100 percent due to rounding.
Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.3: Distribution of Home Health Users in Medicare Fee-For-Service and Medicare Advantage

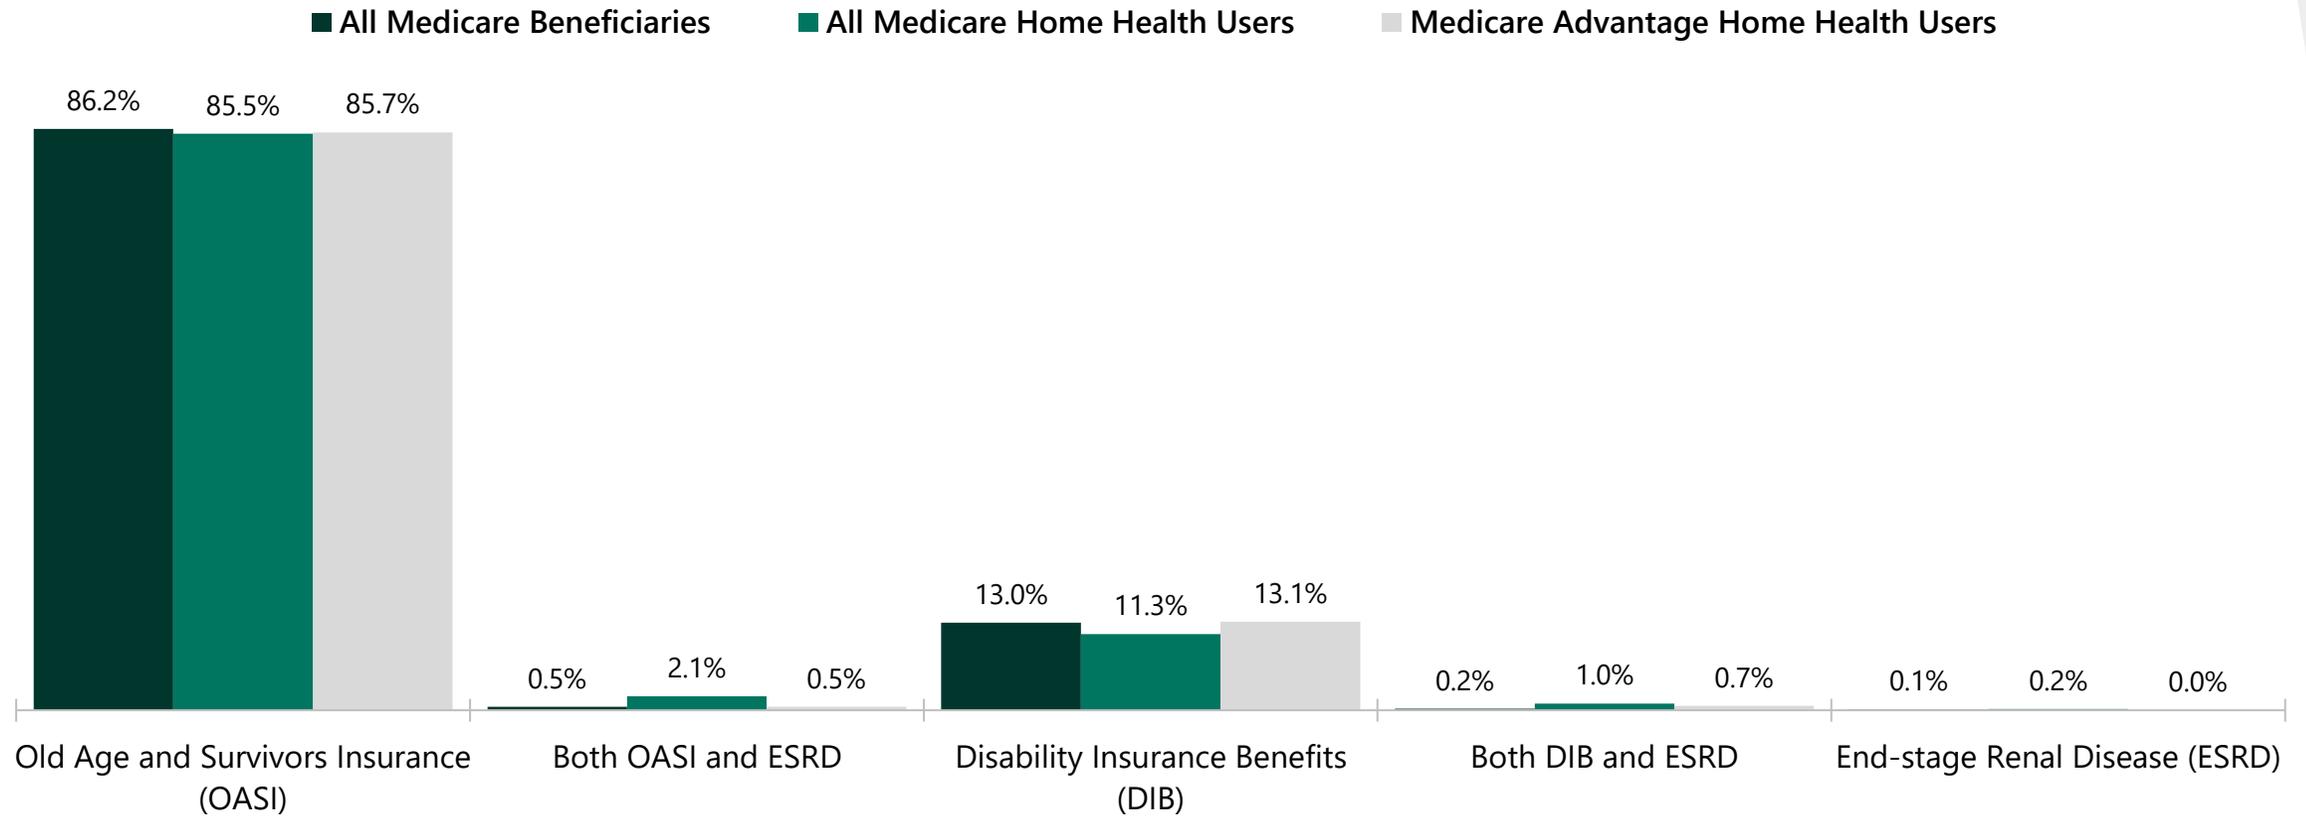

Demographics of Home Health Users

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020. Totals may not sum to 100 percent due to rounding.

Chart 1.4: Reason for Medicare Enrollment of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

Demographics of Home Health Users

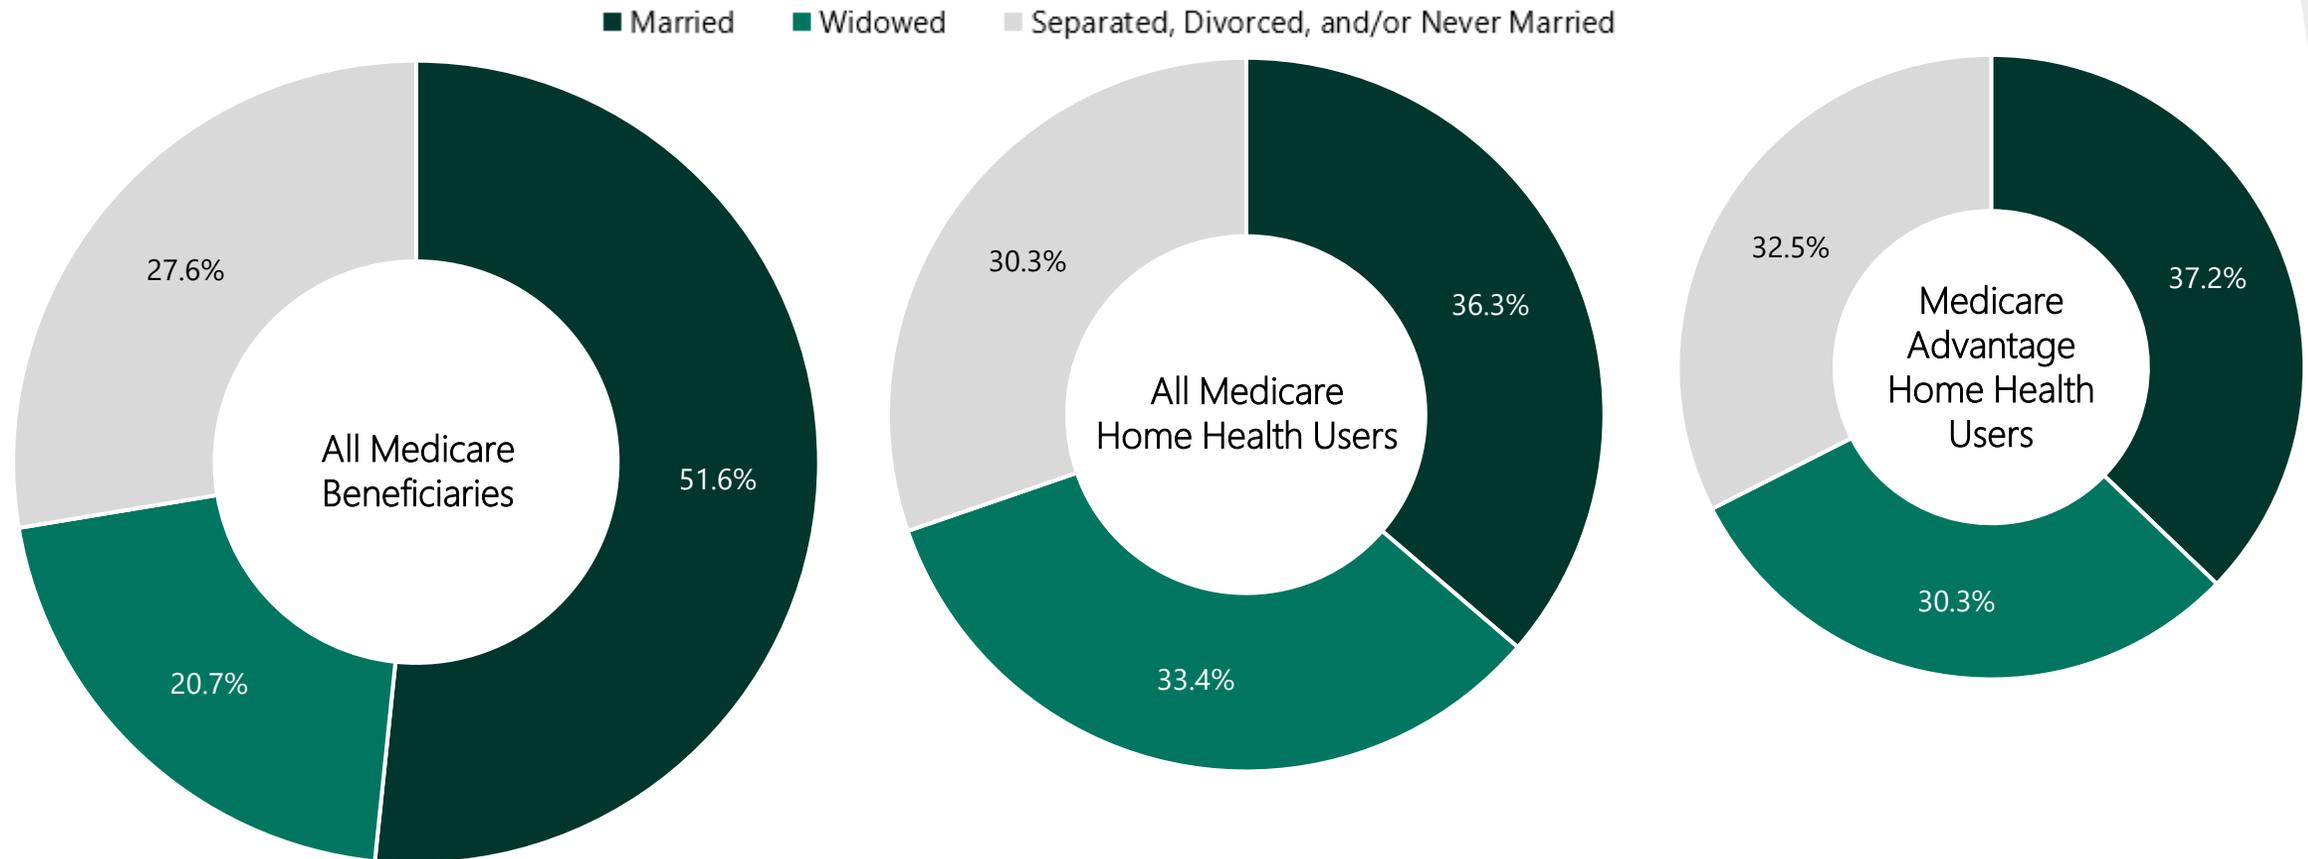

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

Totals may not sum to 100 percent due to rounding.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.5: Marital Status of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

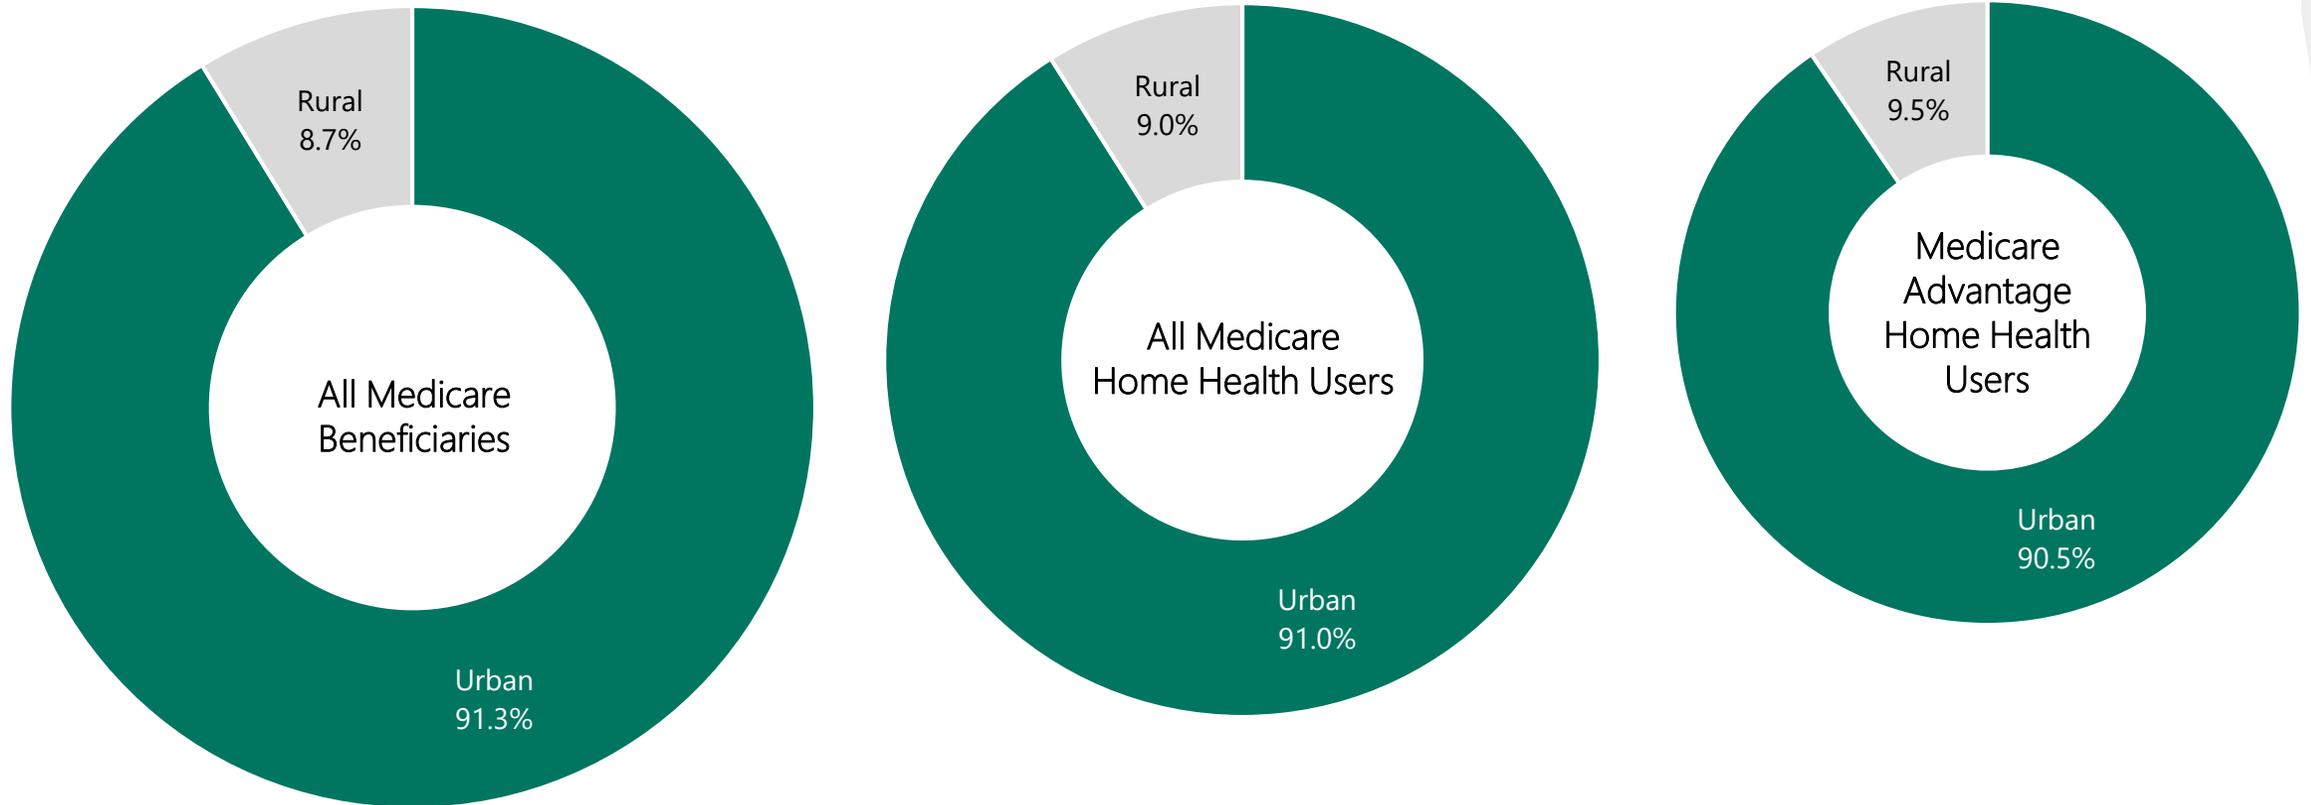

Demographics of Home Health Users

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.
Totals may not sum to 100 percent due to rounding.
Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.6: Rural Status of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

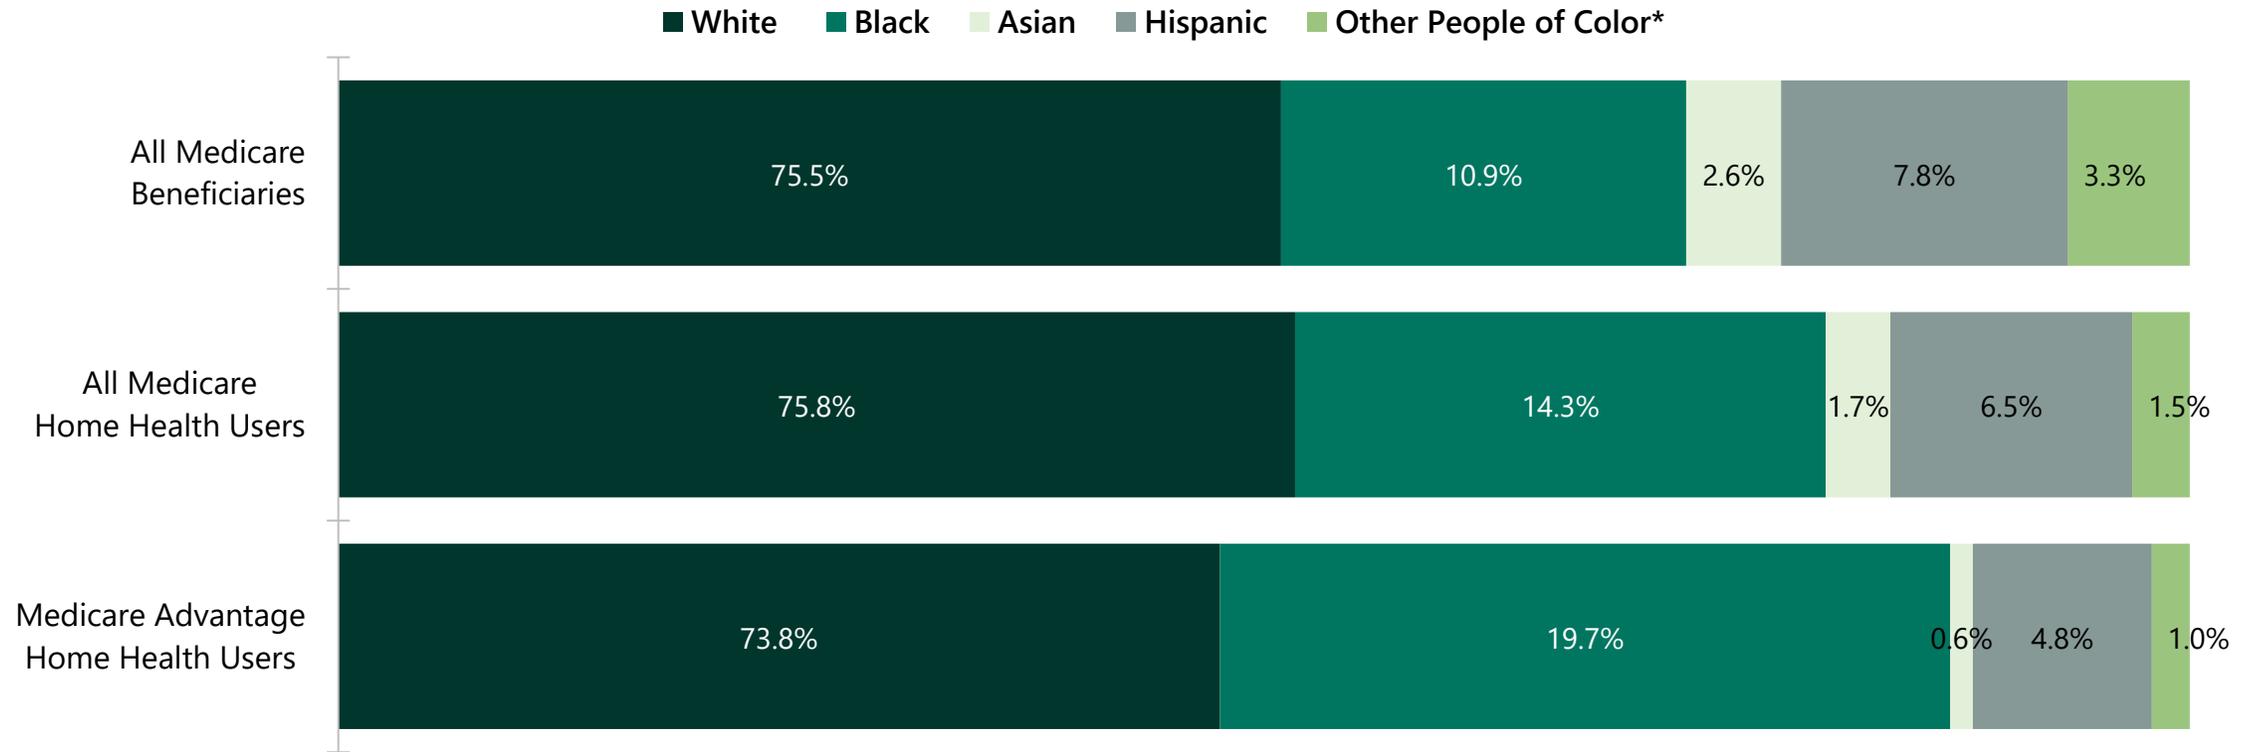

Demographics of Home Health Users

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.
Totals may not sum to 100 percent due to rounding.
Rural is defined as a "small town" or "rural" area.
Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.7: Race of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

Demographics of Home Health Users

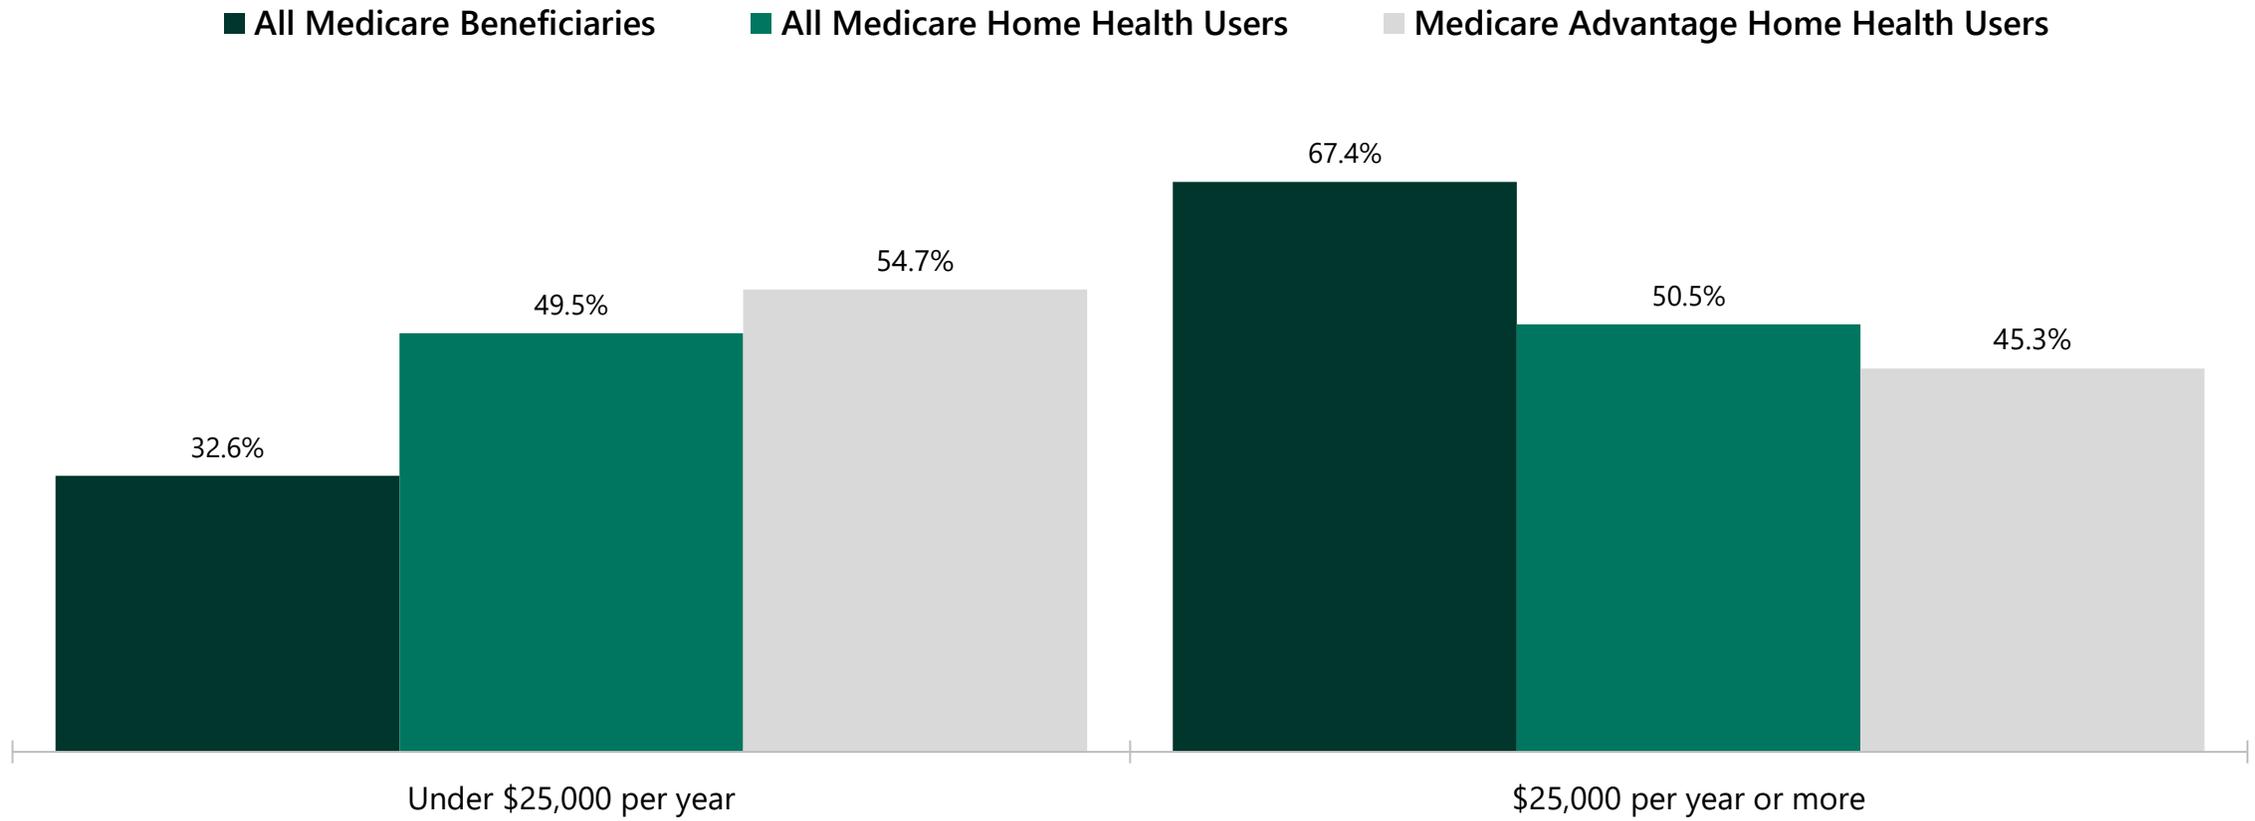

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

*Other People of Color includes American Indian, Alaska Native, Pacific Islander, Other, and More than one race.

Totals may not sum to 100 percent due to rounding.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

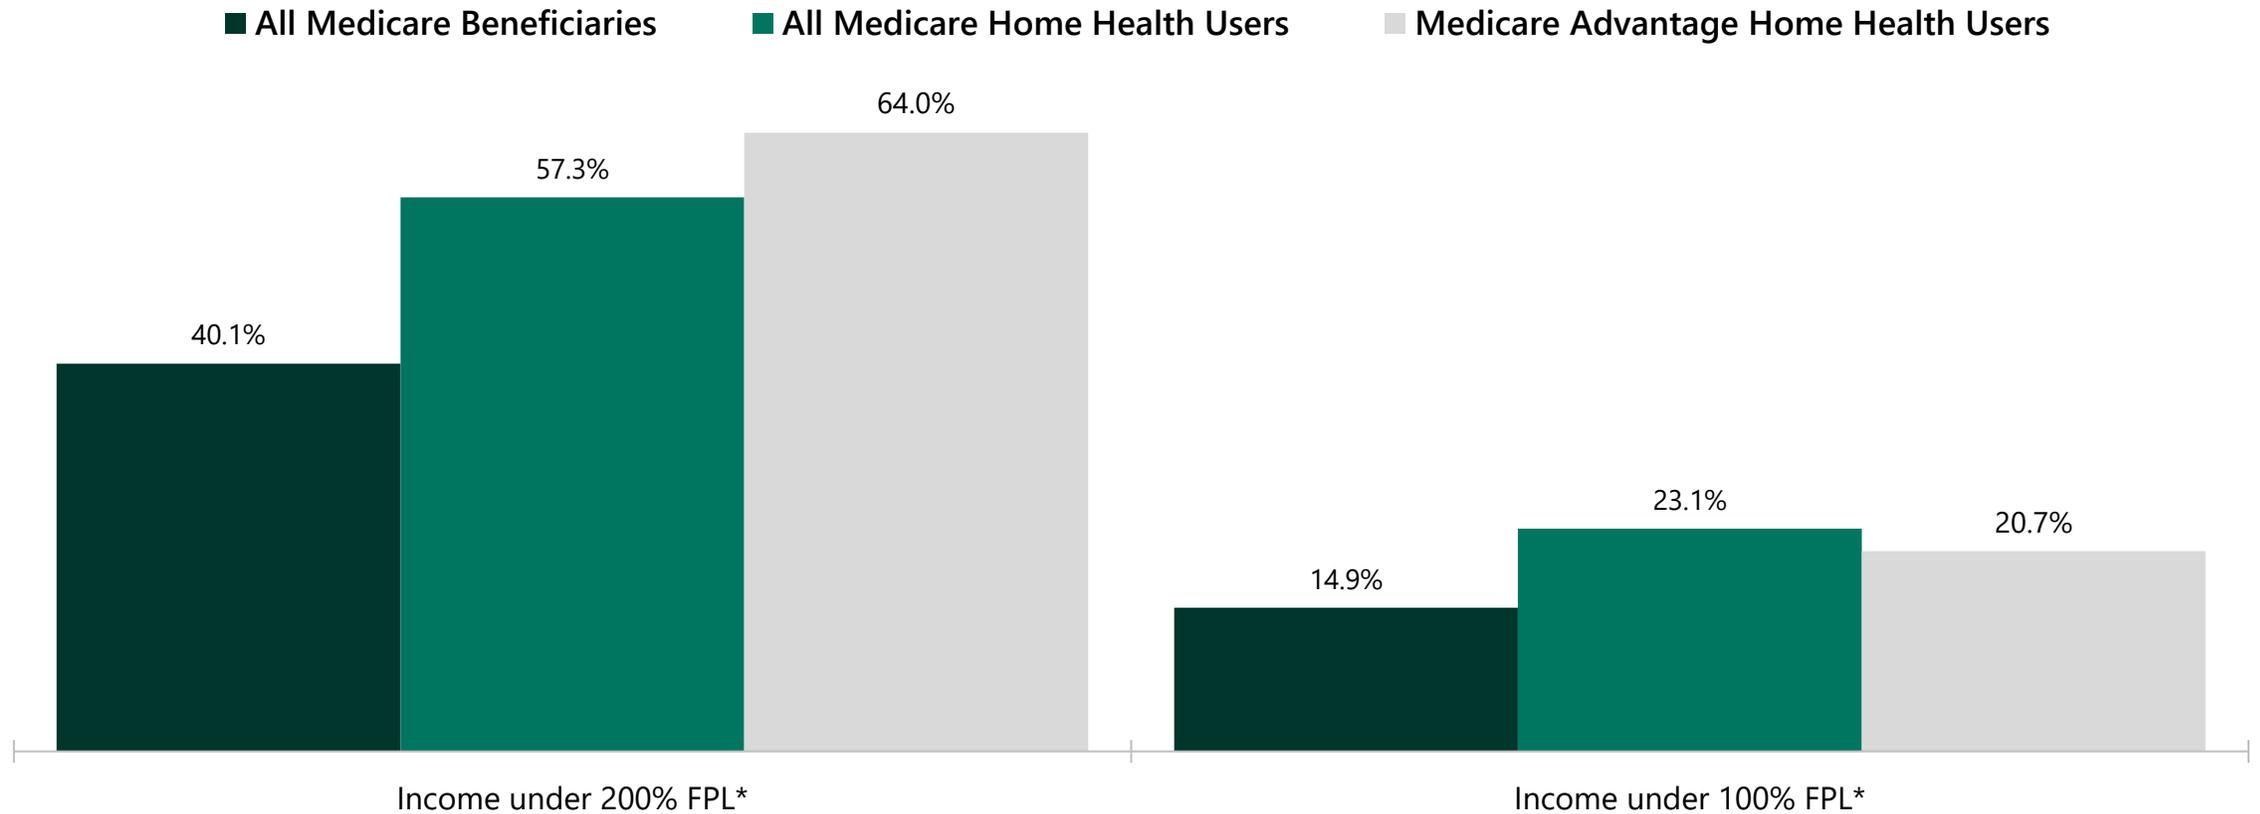

Chart 1.8: Income Distribution of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.
Totals may not sum to 100 percent due to rounding.
Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.9: Income Distribution by Federal Poverty Level (FPL) of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

Demographics of Home Health Users

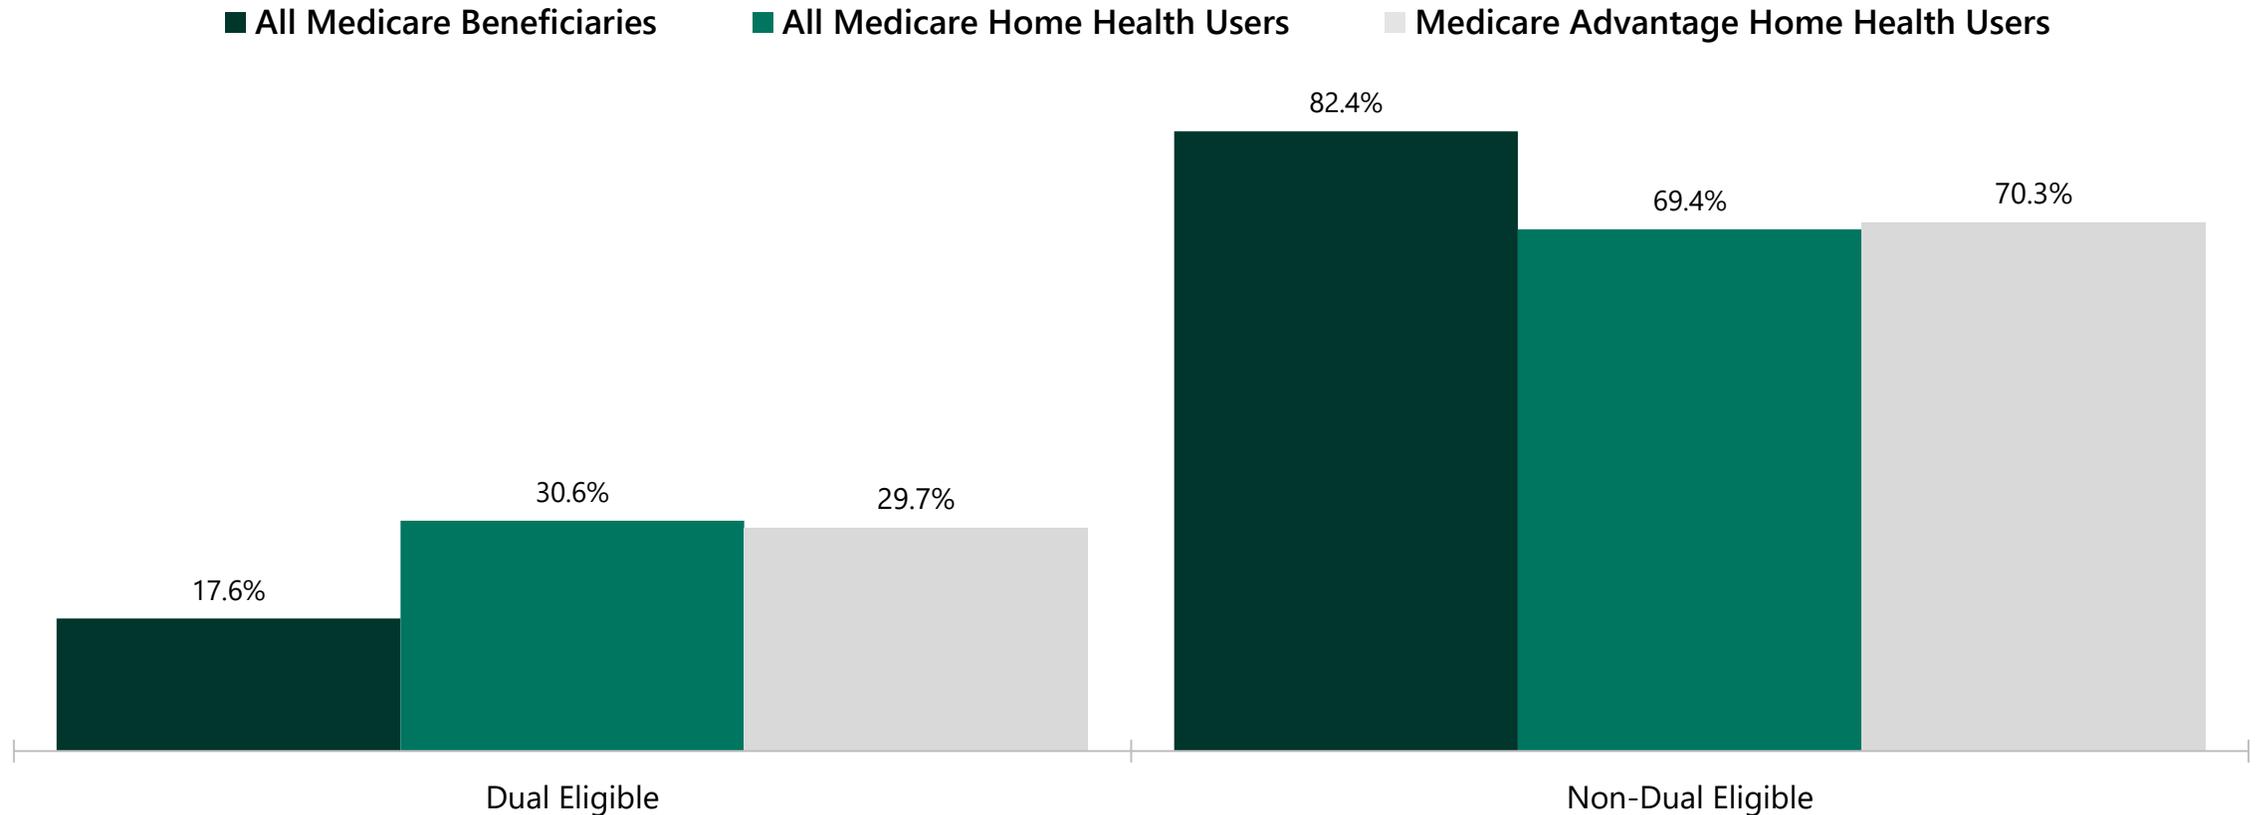

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

*In 2020, 100% of FPL for a household of 1 was \$12,760, a household of 2 was \$17,240, a household of 3 was \$21,720, and a household of 4 was \$26,200. As a result, 200% of FPL was double each amount.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

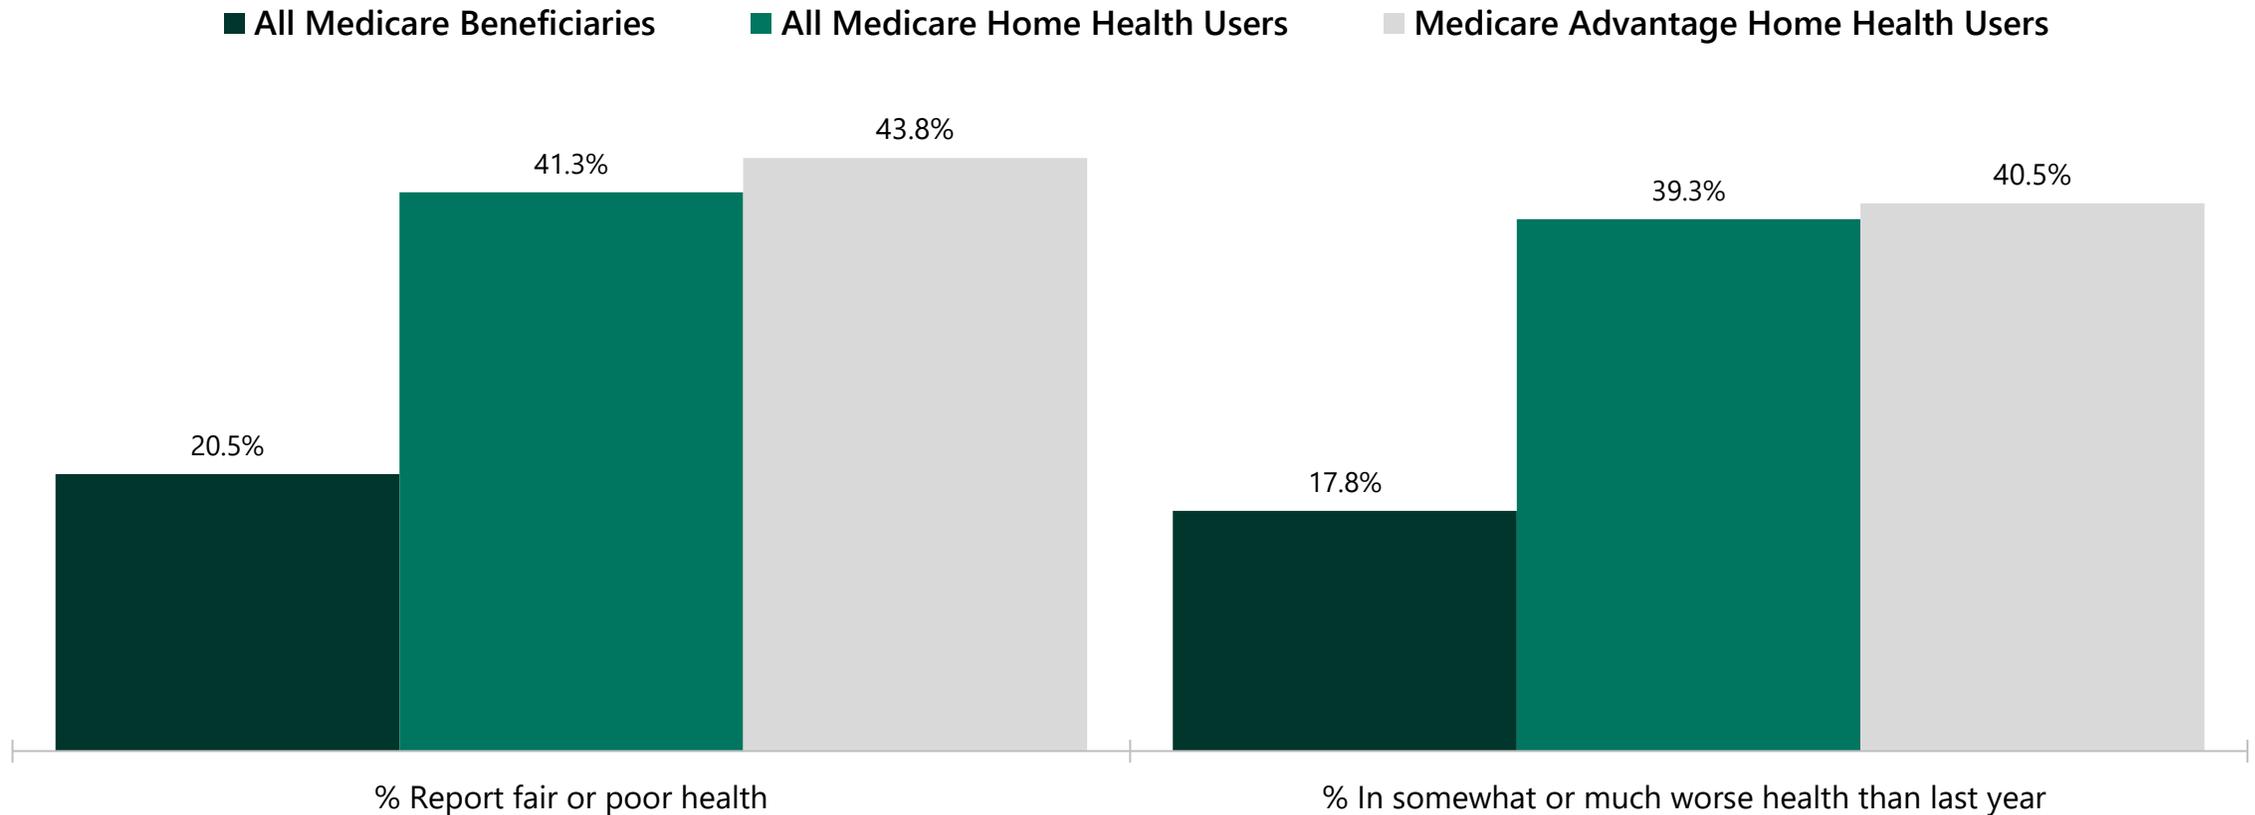

Chart 1.10: Dual Eligibility Status of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.
Totals may not sum to 100 percent due to rounding.
Dual Eligibles are defined as individuals with any state buy-in at any point during the year.
Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.11: Share of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage, by Measures of General Health Status

Demographics of Home Health Users

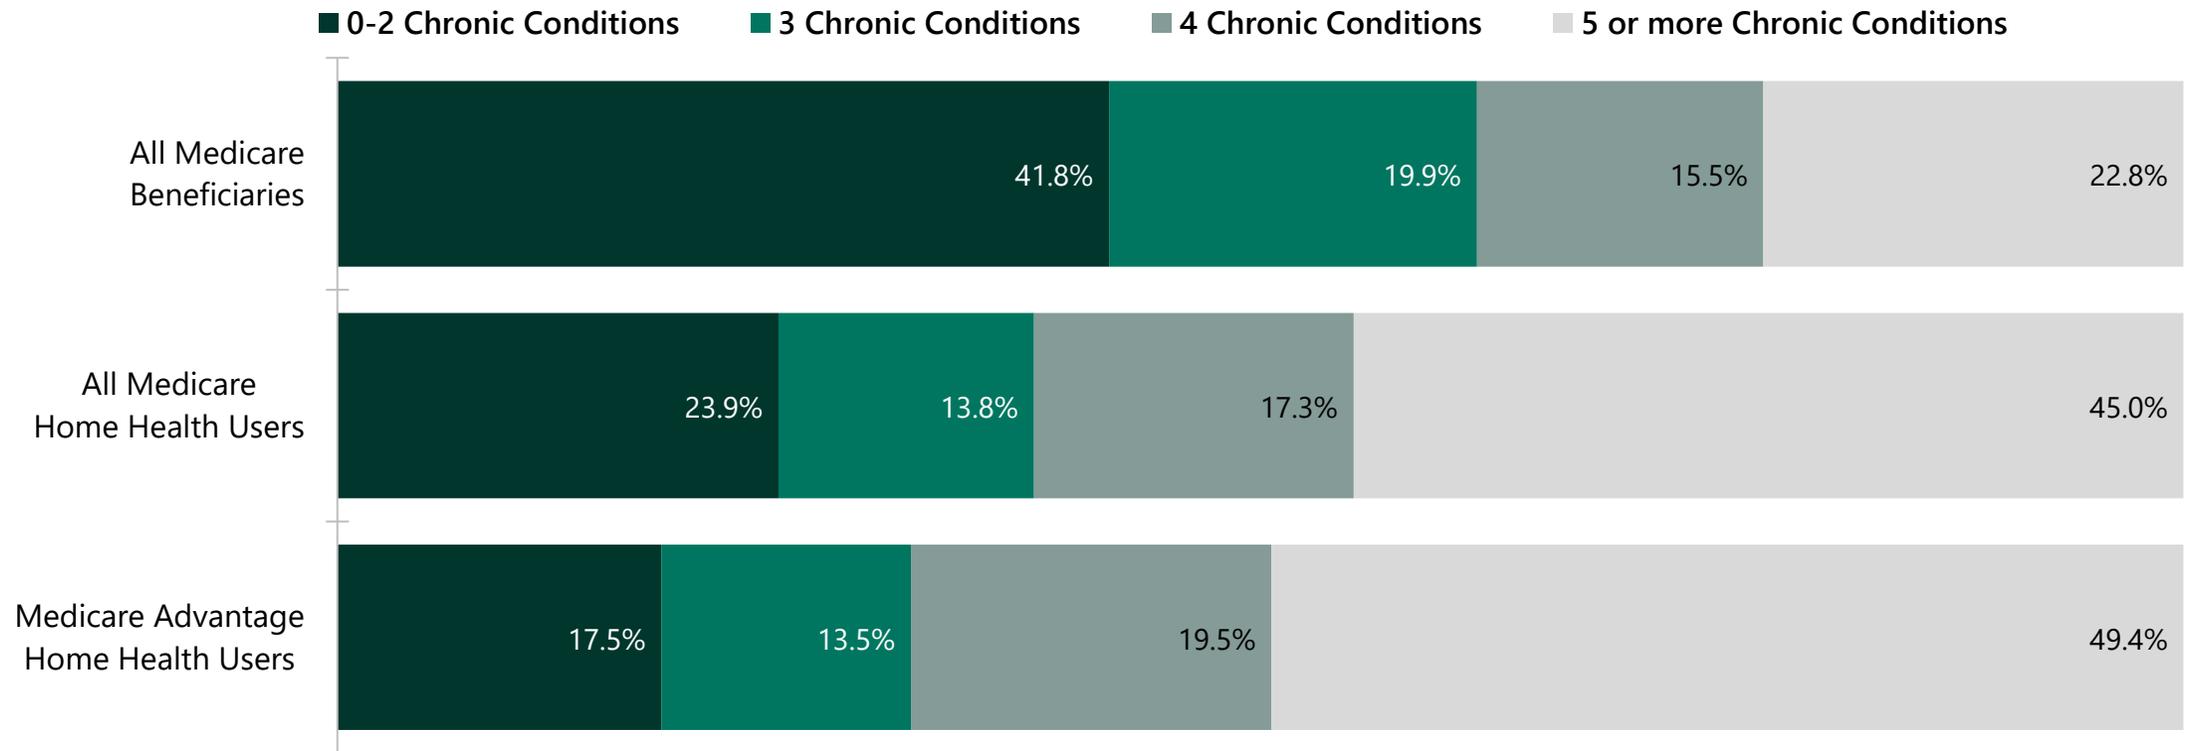

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.12: Share of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage, by Number of Chronic Conditions

Demographics of Home Health Users

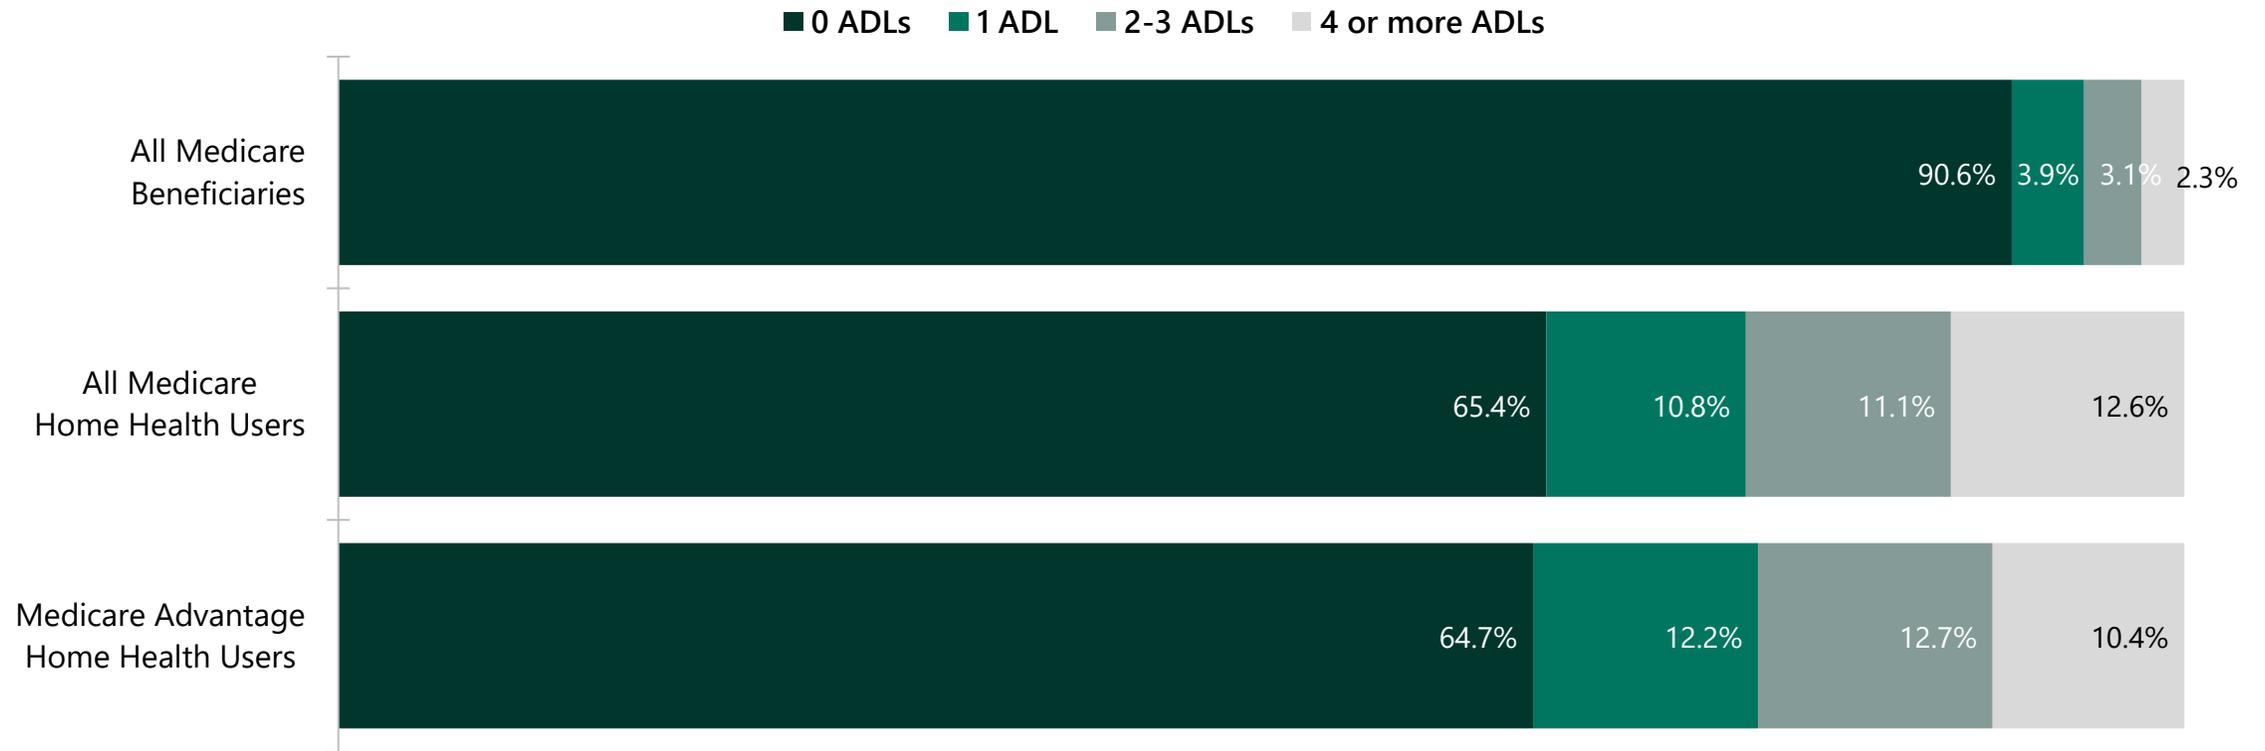

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

Totals may not sum to 100 percent due to rounding.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.13: Share of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage, by Number of Activities of Daily Living (ADLs)

Demographics of Home Health Users

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

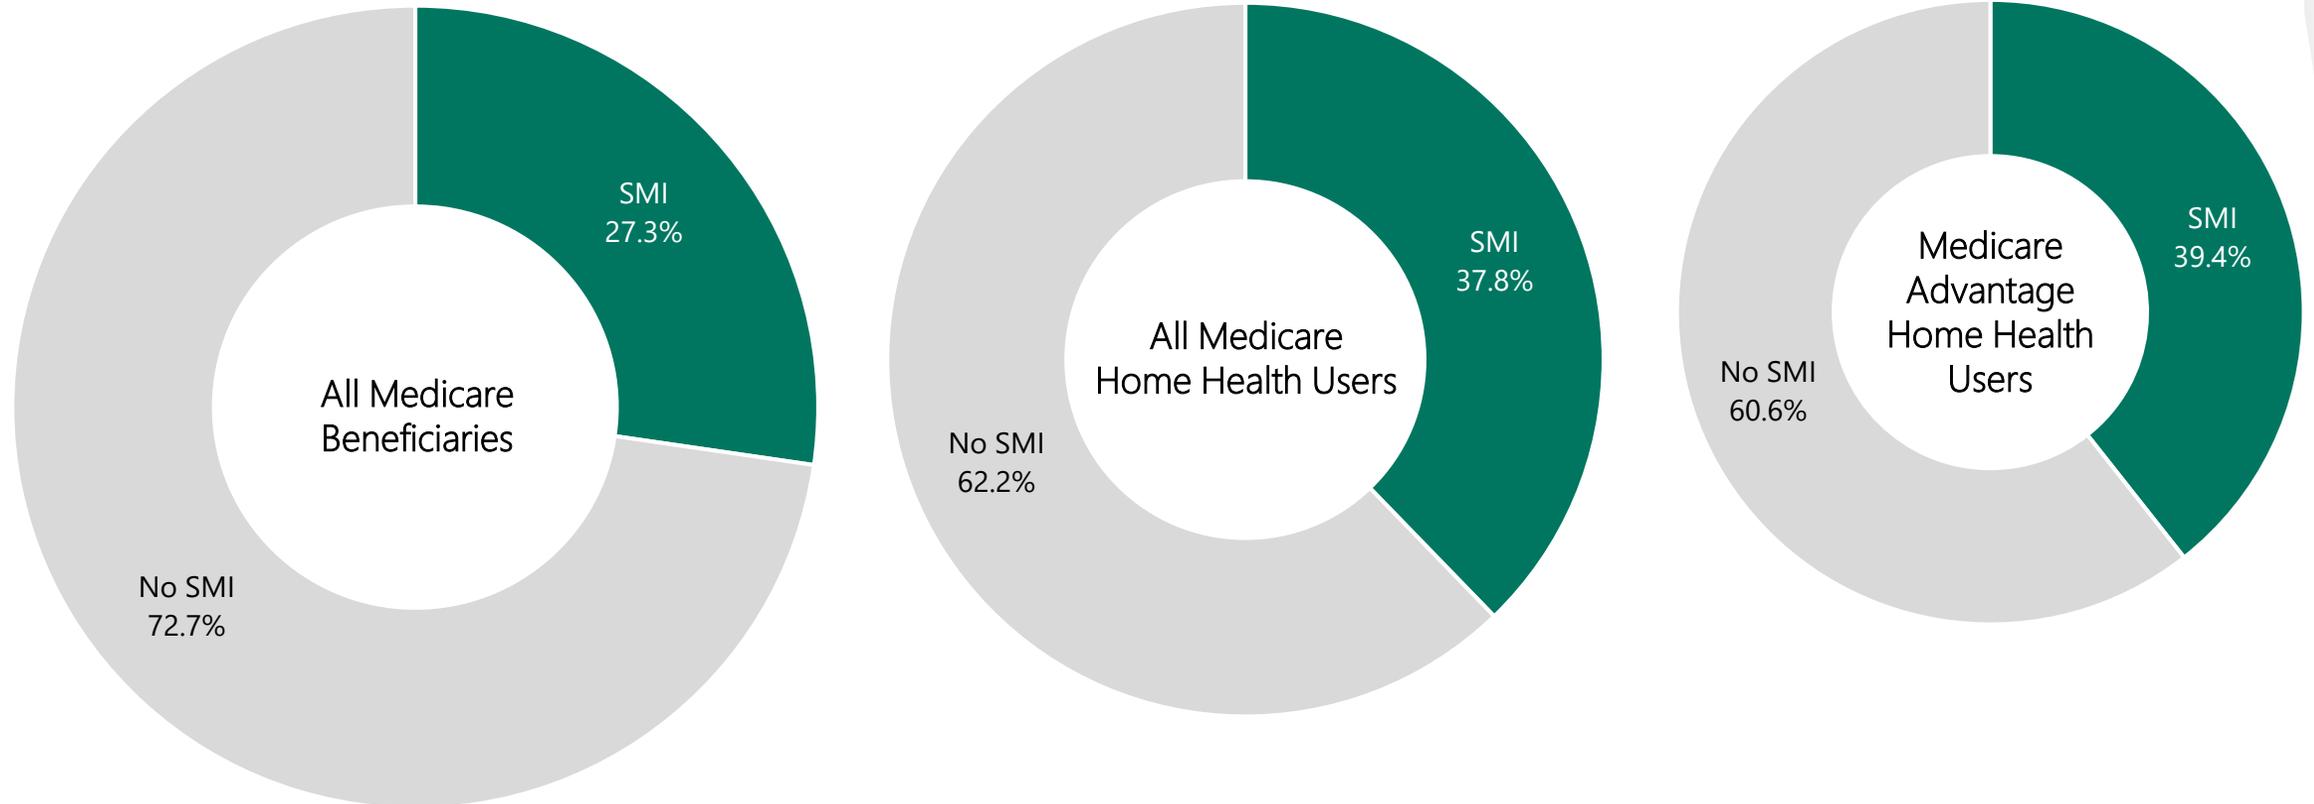

Totals may not sum to 100 percent due to rounding.

ADL = Activities of daily living, such as eating, dressing, and bathing. Limitations with at least 2 ADLs is considered a measure of moderate to severe disability and is often the eligibility threshold for a nursing home level of care.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.14: Share of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage, with Severe Mental Illness (SMI)

Demographics of Home Health Users

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

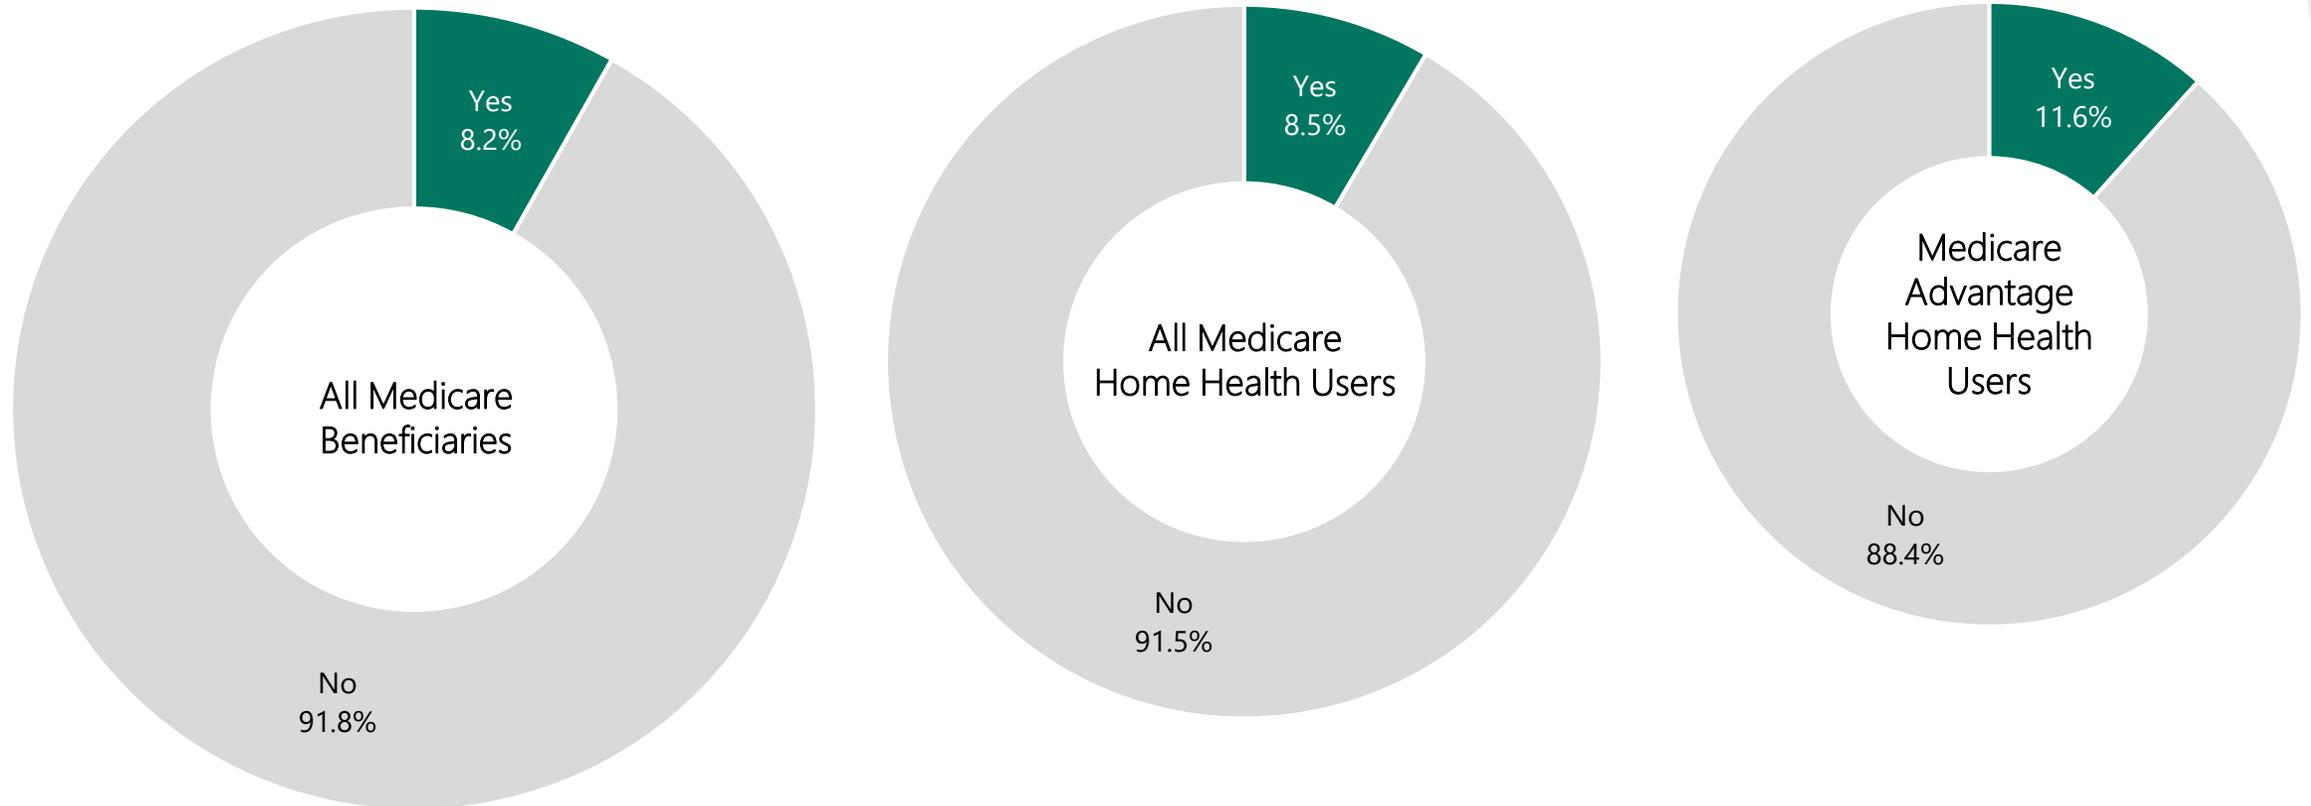

Totals may not sum to 100 percent due to rounding.

Severe mental illness (SMI) is defined as having depression or other mental disorder, including bipolar disorder, schizophrenia, and other psychoses.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

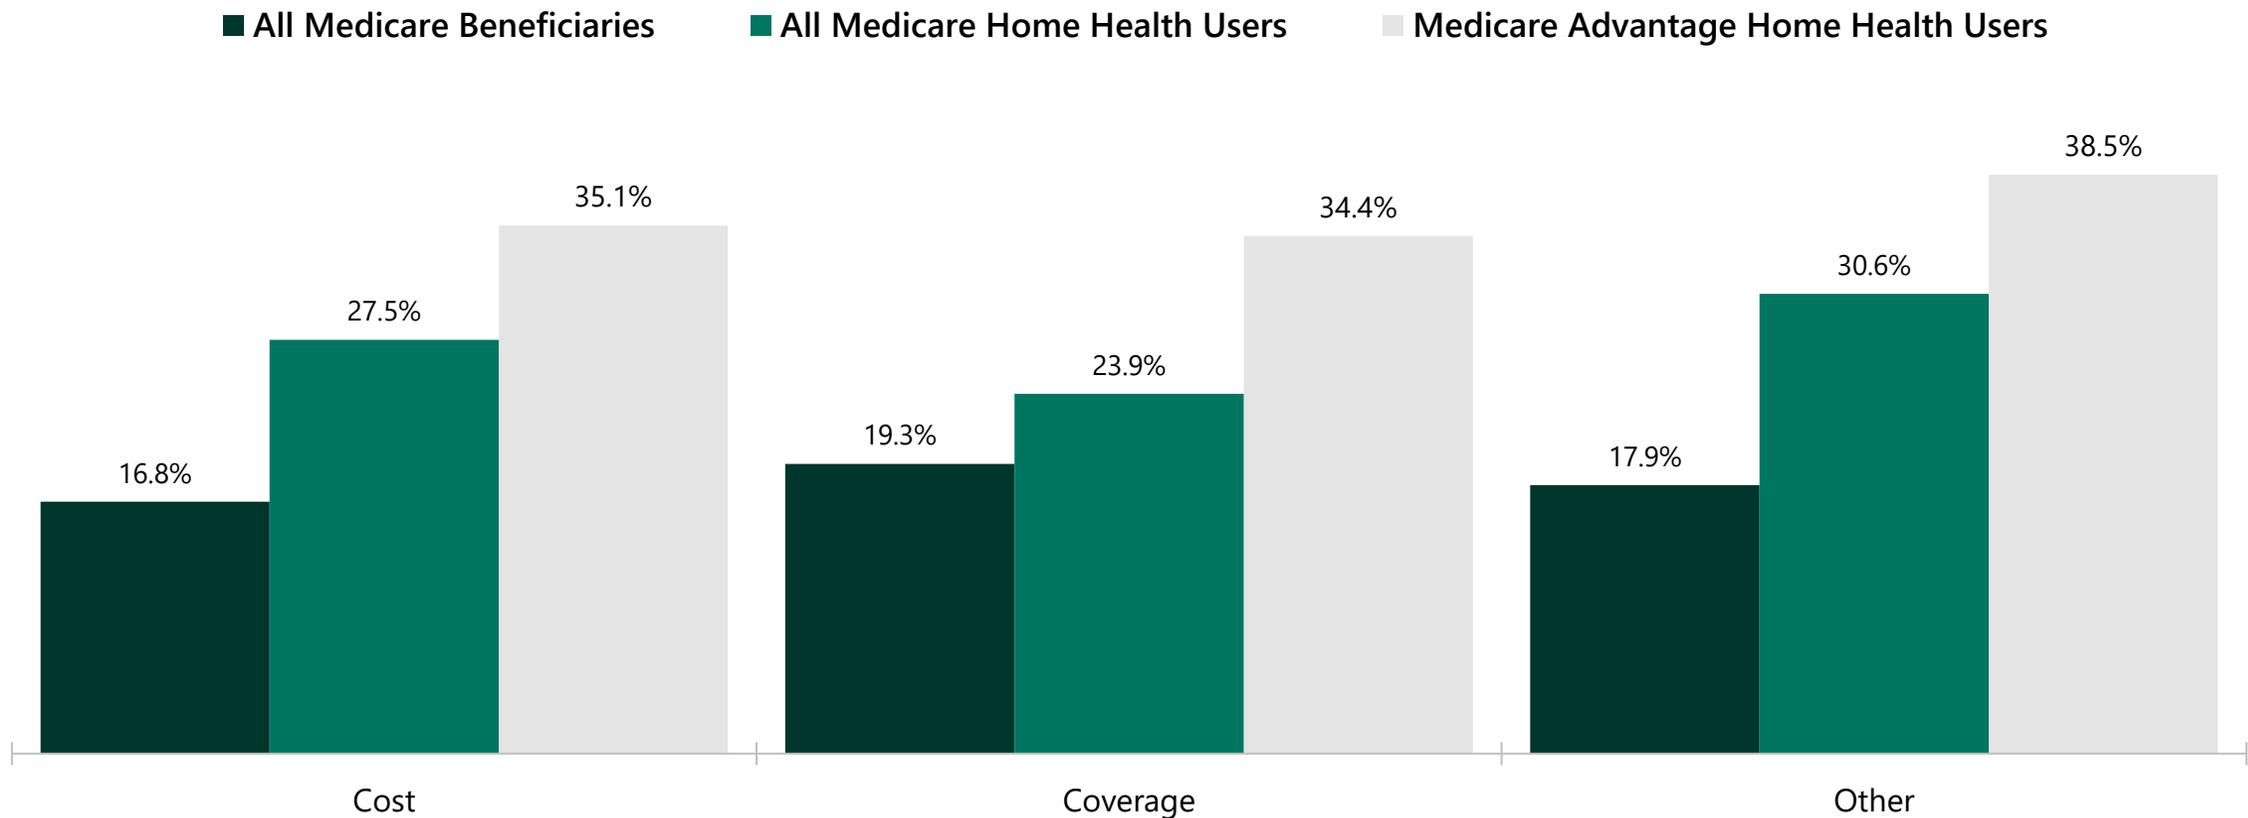

Chart 1.15: Share of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage who had Trouble Accessing Needed Care

Demographics of Home Health Users

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.
Access to care includes information about the respondents' use of all types of medical services.
Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Chart 1.16: Top Reasons Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage had Trouble Accessing Needed Care

Source: KNG Health analysis of the Medicare Current Beneficiary Survey, 2020.

Totals may not sum to 100 percent due to rounding.

Access to care includes information about the respondents' use of all types of medical services.

Respondent can select multiple reasons; the percentages are calculated as the number of respondents who selected the reason over all respondents that indicated having trouble getting needed care.

Note: All Medicare Home Health Users includes both traditional Medicare and Medicare Advantage Home Health Users.

Table 1.1: Selected Characteristics of Medicare Beneficiaries, All Medicare Home Health Users, and Home Health Users in Medicare Advantage

1. QCEW collected by the U.S. Bureau of Labor Statistics, 2021.

2. U.S. Bureau of Economic Analysis multipliers, 2020.

3. KNG Health Analysis.

Note: The QCEW collects wage data quarterly. All states report employment figures on privately owned home health agencies, including for-profit and non-profit organizations. AL, AR, IL, IA, MN, MO, NC, OH and VA submit wage data for their government-owned facilities, which are included in this analysis. The QWEC does not include wage data for HHA contractors, but the multiplier is intended to account for such wages.

Data and Study Population

- The Medicare Current Beneficiary Survey is a nationally representative sample that contains information on beneficiary demographics, health status, household characteristics, access, satisfaction, and usual source of care, as well as insurance coverage. This data includes statistics on both Traditional Medicare beneficiaries and Medicare Advantage beneficiaries.
- To examine the demographic, socioeconomic, and clinical characteristics of Medicare Beneficiaries and Medicare Home Health users, we conducted analyses using data from the 2020 Medicare Current Beneficiary Survey.
- The patient population included in our analysis consists of Medicare beneficiaries who fulfill the following criteria:
 - Both traditional and Medicare Advantage Beneficiaries must be continuously enrolled in their respective Medicare plan for the full year.
 - Medicare Home Health Users must receive home health services at least one time during the year.

Identification of Study Cohorts

- All Medicare Beneficiaries are identified as survey respondents living both in the community and facilities.
- All Medicare Home Health Users are identified as traditional Medicare and Medicare Advantage beneficiaries who receive home health services that were captured in the Outcome and Assessment Information segment of the Medicare Current Beneficiary Survey.
- Medicare Advantage Home Health Users are identified as survey respondents who were coded as Medicare Advantage beneficiaries in the Health Insurance Summary segment in Medicare Current Beneficiary Survey every month of the year.

Descriptive Analysis

- **Demographic characteristics**: Obtained from the following Medicare Current Beneficiary Survey segments:
 - Demographics
- **Socioeconomic characteristics**: Obtained from the following Medicare Current Beneficiary Survey segments:
 - Demographics
 - Health Insurance Summary
 - Household Characteristics
- **Clinical characteristics**: Obtained from the following Medicare Current Beneficiary Survey segments:
 - General Health
 - Chronic Conditions
 - Nagi Disability
 - Access to Care
 - Outcome and Assessment Information
 - Satisfaction with Care

U.S. Bureau of Labor Statistics and Bureau of Economic Analysis Data

- To examine the economic contributions of home health agencies to the US economy, we conducted analyses using 2021 data from the U.S. Bureau of Labor Statistics and 2020 multipliers from the Bureau of Economic Analysis, which are “estimates of regional input-output multipliers for any state, county, or combination of states or counties,” limited to the industry of home healthcare services (NAICS 6216).

Home Health Care Compare Data

- To examine the organizational trends of home health agencies, quality of home health agencies and home care, and the patient outcomes of home health users, we conducted analyses using 2015-2021 Home Health Care Compare data. Due to data collection pauses in 2020, the 2021 Home Health Care Compare data is a duplicate of 2020 data and was not referenced in this report.

- Medicare Cost Report data is a collection of facility characteristics, utilization, costs and charges, Medicare settlement, and financial statement data reported to the Healthcare Cost Report Information System. Cost Report data is reported annually by all Medicare-certified institutional providers, including home health agencies.
- Medicare Cost Reports were used to count the number of free-standing home health agencies and calculate the total home health agency expenditures for economic impact analysis.
 - The number of free-standing facilities corresponds to a unique count of home health agency provider numbers in the Home Health Agency Report Files for FY 2015-2020.
 - The total expenditures for individual home health agencies correspond to the total operating expenditures listed on the home health agency's statement of Revenues and Expenses (Worksheet F-1) accounting for additions and subtractions in the FY 2020 HHA NMRC File and then aggregated up to a state level.

- The 2015-2022 Q1 100% Home Health Agency Standard Analytic LDS, 2015-2022 Q1 100% Inpatient Standard Analytic File, and 2015-2022 Q1 100% Skilled Nursing Standard Analytic LDS (SNF SAF) were used to examine:
 - the clinical profile of home health users.
 - the role of Home Health Agencies (HHAs) in the post-acute care industry;
 - the organizational trends of home health agencies; and
 - the health outcomes of home health users.
- To align with previous analyses, claims were not excluded based on Medicare status or coverage type.
- We used 2 methodologies to define Part A home health care episodes/visits.
 - When assessing Part A home health episodes with a preceding hospitalization, we required the home health claims to have a short-term acute care hospital stay within 14 days of admission.
 - When assessing all Part A home health episodes, we required the home health claims to have a claim value code of "62," which indicated Medicare Part A was the source of payment.¹

1. Morefield, B., & Tomai, L. (2021). Distinguishing frontloading: an Examination of Medicare Home Health Claims. *Health Services and Outcomes Research Methodology*, 21(4), 477-485.

- In this analysis, we define a readmission as an admission to a short-term acute care hospital (STACH) within 30 days of an initial, or 'index', admission to a STACH. To be considered an index admission, there must be no other STACH admission in the prior 30 days.
- Using the Medicare claims data, we identified readmission rates based on the following methodology.
